Keeping the construction industry moving

National network, local delivery

Total fuel management solutions with reliable bulk fuel and lubricants supply

Never run out of fuel

Reduce your emissions, assure your fuel supply and store safely. Certas Energy will build a fuel solution that you can rely on

Who is Certas Energy?

We are the UK's largest independent supplier of fuel and lubricants, operating a national network that delivers a competitive, responsive local service ensuring that your site never runs out of fuel.

Innovative fuel and lubricants management solutions

Making our expertise and outstanding service count for our customers, our 2,500 employees work as one team of fuel and lubricants specialists - experts in the supply of bulk and specialist fuels, lubricants, additives and innovative fuel management solutions.

From specialist suppliers to large scale contractors, our customers design, build, maintain and supply construction projects that shape the UK's infrastructure, housing, industrial and educational landscapes in which our diverse communities thrive.

Listening - Collaborating - Partnering

We understand unique build environments and the balance needed between procuring fuel with safety, sustainability and managing assets. We create partnerships that start by really understanding your fuel needs and priorities. Taking a collaborative approach, we listen carefully to fully appreciate your business challenges and, where appropriate, suggest fuel products and services to help you achieve your construction and commercial goals.

Our national fuel network, delivering your local service

Regional depots ensure a local service from our knowledgeable local drivers - with optimised fuel deliveries at flexible times to suit our customers. Our Technical Teams support all aspects of fuel management from product choice, secure storage, spill management and monitoring - ensuring that you never run out of fuel

Why choose Certas Energy?

A responsible approach

We take our responsibility seriously, reducing the environmental impact of our operations:

- Minimising waste
- Protecting biodiversity
- Reducing harmful emissions
- Providing training and development
- Creating local employment opportunities
- Investing in the communities in which we operate

We continually innovate through product development to bring fuel solutions that are easier to transport and to automate usage reporting.

Keeping your sites moving

Our robust infrastructure assures nationwide, reliable supply. We operate in excess of 130 depots, over 1,000 tankers and our 2,500 employees facilitate the delivery of over 6 billion litres of high quality fuel and lubricants throughout the UK each year.

Consistently competitive prices are maintained, even in the most turbulent commercial climate, through our varied supply base comprising a range of leading oil companies.

Smarter fuel choices

For cleaner, safer, healthier construction

Actively encouraging engagement with contractors at the earliest opportunity in the construction process, we know that procurement of fuel and lubricants is an essential part of delivering construction projects and are committed to supporting a safe, efficient and sustainable construction industry.

Win tenders with better environmental credentials

Mindful of the challenging targets set out in the UK Construction Strategy 2025, pressure to reduce pollution and increasing environmental regulations compliance, we can help you to make smart, well-informed fuel choices.

Whether you're faced with end client or business-led initiatives to lower environmental impact, taking a collaborative approach means we offer support with challenges such as reducing emissions, lowering costs and delivering projects faster.

Offering sustainable fuel options

As a responsible business, we are working alongside our forward-thinking strategic partners to balance issues of performance and pollutant concerns, whilst delivering genuine cost-effectiveness.

Pioneering the use of new paraffinic fuels in the UK, like Shell GTL Fuel, demonstrates our commitment to providing more sustainable fuel options and helping the construction industry to reduce its output of harmful emissions.

Bringing environmental, sustainable and business benefits to the table

These new fuels not only help tackle the air quality issue, but also offer other benefits to construction plant machinery and vehicles, including reduced noise levels in some engines, safer storage, are non-toxic, biodegradable and improve starting performance in cold conditions with zero loss in efficiency.

Approaching social, environmental and economic issues responsibly

We understand the importance of balancing the responsibility of leading best practice in health, safety and environmental matters with a realistic need to deliver construction projects on time, with the right quality and on budget in this low margin industry.

A responsible approach to our operations whilst supporting your environmental priorities

Your peace of mind, guaranteed

Health and safety is paramount for us - it is fundamental to our business performance, as well as being our commitment to you.

Working together to make health and safety our priority

We're committed to preventing injuries to our colleagues, customers and others who may be affected by our activities. Our culture of strong safety and compliance principles, drives our dedicated Safety First and Doing the Right Thing campaigns.

Our management systems are robust through accreditations in health and safety (OHSAS 18001) quality (ISO9001) and environmental (ISO14001).

Continual commitment to improvement

Most recently our commitment to carbon neutrality and energy management system was awarded ISO15001.

We are members of the Fleet Operator Recognition Scheme (FORS). This assures that, when it comes to fleet operation, our approach to safety, efficiency, and environmental protection meets exacting standards and demonstrates our commitment to measuring, monitoring and improving our performance.

Products that perform, service that adds value driving construction forward

We know that you need to keep your machinery powered up whilst performing safely and reliably at all times - we're here to help you operate more effectively nationwide.

Comprising high performance fuels, lubricants and additives as well as essential accessories and supplementary products, our extensive range and efficiency-enhancing services deliver results - even when faced with the most demanding of situations.

And, with our proven track record serving the construction industry, our construction sector fuel and lubricants specialists will advise on the most suitable products to ensure your operations run as smoothly, efficiently and sustainably as possible.

Fuelling, protecting and sustaining

Our wide range of standard high-performing and 'green' fuels, as well as packed fuels with a variety of dispensing options, ensures you have a choice to suit every application.

Our lubricants keep your machinery functioning more effectively, efficiently and reliably in a wider range of conditions. Most of our products can be available for next day or emergency delivery, and many are approved by leading OEMs including Caterpillar, JCB and Volvo.

AUTHORISED LUBRICANTS DISTRIBUTOR

Bulk fuels

A diverse range of bulk fuels is available, including road and red diesel as well as gas oil for heating and power generation – delivered on time and in full.

Specialist fuels

A range of the latest speciality fuels, including renewable heating fuels to reduce CO₂ emissions.

Cleaner burning alternative - Shell GTL (Gas To Liquid)

A safe, biodegradable direct alternative to diesel that lowers emissions and improves air quality.

Certas Energy is the sole distributor of Shell GTL Fuel in the UK. This paraffinic fuel offers a cleaner-burning alternative for use in diesel engines. Suitable for on-road and off-road applications, it both lowers emissions and improves air quality and can be used as a direct replacement for conventional diesel fuels with no modifications required.

The GTL technology lowers local emissions of regulated pollutants: Particulate Matter (PM), Nitrogen Oxide (NOx), Carbon Monoxide (CO) and Hydrocarbons.

Lubricants

Lubricants are as important to the smooth running of your operations as fuel.

We are a one-stop shop supplying products designed to lower your operating costs and increase equipment availability, with a full range of hydraulic oils, engine oils, greases and other lubricants from leading brands that all meet specifications for Caterpillar, JCB, Sany and Volvo.

Our local technical teams ensure that you use the best-suited products for your equipment to deliver optimum output and lifespan. Technical advice, support and services such as Shell LubeMatch and Shell LubeAnalyst are always on-hand whatever your challenge.

Stock products come in bulk and packed options and delivered nationwide within five working days (with next day delivery available on many items for emergency supply).

Additives

Additives help you reduce the cost of maintaining and replacing your machinery, as well as save you money by improving your fuel's performance and minimising storage problems and waste. The range includes Gas Oil Extra, Anti-Bug Kill, Anti-Wax, Fuel Store Plus and Diesel Power Restorer.

AdBlue

If your machinery's engines are fitted with SCR catalysts, AdBlue® helps you to reduce harmful emissions meeting the standards for Euro 5 and Euro 6 and can lower engine operating costs. Our AdBlue® is ISO 22241 compliant and available in a variety of packs including jerry cans, IBCs and bulk.

Stress-free fuel management

Fuel management solutions that give you visibility and total control over your fuel usage, helping you to monitor volumes, reduce risk and save money.

Fuel cards

Accepted at over 2,000 locations throughout the UK, a Certas Energy fuel card keeps your employees on the road and helps you monitor and evaluate fuel spend.

With a Certas Energy fuel card, you can save money with our bespoke packages, competitive prices and flexible deals or bulk purchasing, also with the ability to track and minimise your fuel costs using our online portal.

FuelTrace management

Our FuelTrace telematics (vehicle tracking system) uses GPS technology and on-board diagnostics to give you full visibility and real-time data relating to your vehicles' movements. This helps you reduce costs significantly by implementing efficiencies and minimising the risk of fraud and misuse. With no penalties or termination fees you can add or remove vehicles whenever you need.

Making it easy to maintain, move, store and access your fuel on site

Fuel storage products to help keep your fuel safe and secure on congested sites. We'll also give you expert advice on products that can assist with improving the compliance, reliability and cost efficiency of your fuel storage set-up.

Tanks

From size to dispensing options and security, we've got your requirements covered

To meet your specific requirements we offer a range of both plastic and stainless steel tanks from 1,225 to 62,000 litres, circular or rectangular.

Our tanks are available as supply only or can be delivered, installed and maintained. Different levels of dispensing equipment are available with fuel management systems that can automate deliveries through our telemetry devices ensuring total peace of mind for uninterrupted fuel supply. If security is an issue, tanks can be supplied with a fuel management package (including fobs and key codes).

Transportable cube tanks

Driving down risk and cost

The transportable cube tank can make your site safer and your everyday operations easier and more efficient, ultimately driving down costs and risk.

Our transportable cube product is also stackable as a 2,900 litre bunded storage tank, which comes fitted with our fuel monitoring system (telemetry) – enabling you to carry on safely in the knowledge that there will always be fuel on site to keep your plant machinery working.

Tank accessories and security

Keeping your sites operational and secure

A full range of high-quality accessories including hose reels, nozzles, caps, filters, gauges and diesel pumps. Our tank locks and tank monitoring technologies can also keep your fuel secure as well as triggering automatic top-ups to ensure that you never run out.

Payment options

Avoid one-off costs with short or longer term leasing

Dependent on your needs, there is a variety of flexible payment options, including leasing tanks on a weekly or two to five years agreement, helping you avoid one-off costs and giving you peace of mind that your tank is always safe, functional and fully compliant.
