

FuelTrace

By **certas** energy

Driving total fleet visibility

What is FuelTrace?

FuelTrace is a new fleet management solution from Certas Energy that uses telematics, GPS technology and onboard diagnostics to deliver total fleet visibility.

No matter a fleet's size, or where its vehicles are in the world, FuelTrace is able to track vehicle and driver performance to support efficient and effective fleet management.

Fleet managers are able to use FuelTrace as a standalone solution, or in conjunction with fuel card data, for a full view of fleet fuel expenditure and the most accurate MPG measurements on the market.

Why FuelTrace?

- Achieve total fleet visibility from a single browser-based reporting dashboard accessible via desktop, tablet or mobile.
- Reduce the total cost of each journey using insights on driving behaviour, vehicle performance, fleet fuel spend and accurate MPG measurements.
- Automate your admin with fully digitalised reporting on daily vehicle checks, timesheets, business/private mileage, speeding, idling, out of hours usage and more.
- No long-term contract requirement offers the flexibility to scale FuelTrace up or down depending on the needs of your business.
- Improve productivity, efficiency and fleet control with enhanced route planning, journey data and real-time alerts.

Key features:

- **Live map:** Follow your fleet in real-time to provide more accurate arrival times, or allocate jobs based on location for maximum efficiency.
- **Driver performance:** Monitor speeding, idling and poor driving behaviours to put safety first and improve fuel economy.
- **Journey history:** Keep track of routes, stops and arrival times to monitor driver productivity and reduced unauthorised vehicle use.
- **Fuel card integration:** Link fuel cards directly to FuelTrace for accurate MPG measurements across your fleet - helping you calculate the total cost per journey.
- **Geo-Plus:** Know when your fuel cards are being misused with real-time alerts to limit potential losses to your business.
- **Geo-fencing:** Create, manage and monitor geofence perimeters to understand when drivers leave and arrive in a chosen area, or receive alerts when vehicles break predefined location rules.
- **Centralised reporting:** Whether you're looking for timesheets, business/private mileage or daily vehicle check information, reports can be automatically generated and accessed from a single browser-based dashboard.
- **Alerts:** Receive real-time alerts by SMS or email when drivers exit geofenced areas, use vehicles or fuel cards out of hours, speed idle or tamper with FuelTrace units.

Save time - 30% increase in staff productivity

Automate administration

Move away from time-consuming pen and paper fleet management to fully automated reporting that can be uploaded directly into your HR systems.

Automatically generate timesheets, business/private mileage, fleet fuel spend and more, with data delivered directly from vehicles to assure accuracy.

On-the-go fleet management

Manage your fleet wherever you are with real-time fleet mapping and driver behaviour tracking in the FuelTrace app.

And with the separate, driver-focused Fleet Vehicle Check app, your workforce can do their daily checks and admin tasks from their mobile – eliminating unnecessary paperwork.

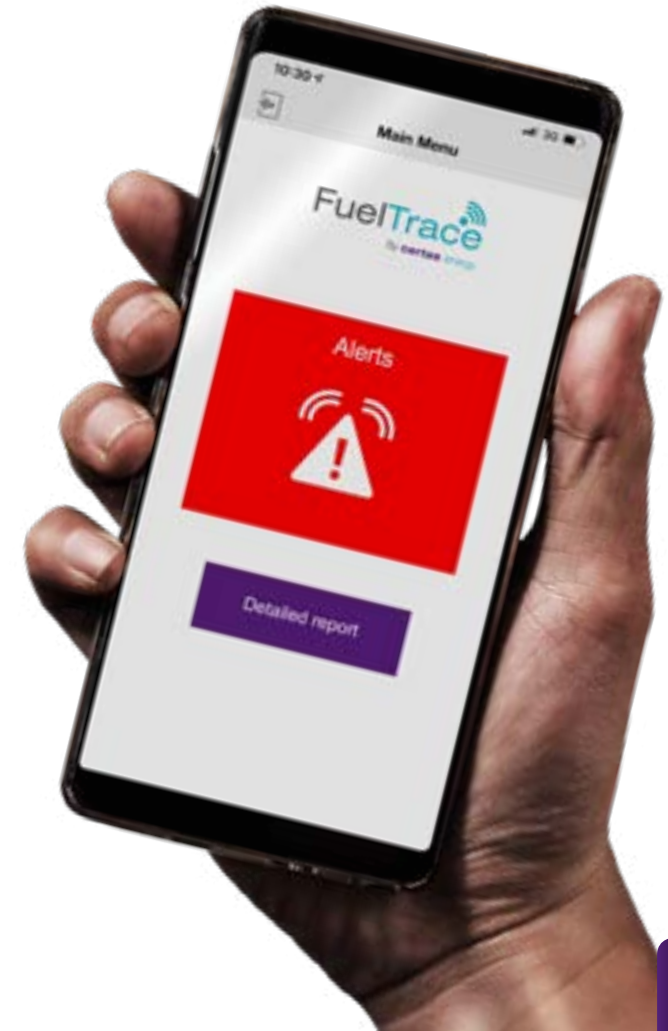

Put safety first - 20% reduction in road accidents

Maintenance matters

Know when your vehicles are due a service, repair or MOT to avoid unplanned downtime and avoid small fixes with defect and maintenance management reporting.

Reduce road accidents

Protect your workforce and the public with driver performance scores. Ranking individual driving behaviours from 0-100, this score can be used to reduce the risk of road accidents and improve driver road awareness through targeted training.

Prevent fuel card fraud

FuelTrace's Geo-Plus feature prevents fraudulent transactions by cross-referencing fuel card usage. With vehicle location to notify you if a card is used without the presence of an associated vehicle.

Stay on track

Get alerts when your vehicles stray off track with FuelTrace's Geo-fencing feature. Follow your fleet in real time on the live map and define set areas with Geo-fencing to know when vehicles are being driven outside of their planned route.

Stay secure out-of-hours

Creating a Geo-fence around your yard or depot can provide additional security, you'll get instant notification and the ability to track the vehicles movements out of hours.

Stay in control - Real-time fraud and vehicle misuse reporting

Drive fuel efficiency - 25% reduction in fuel costs

Improve fuel economy

Ensure your fleet is taking the most direct route between jobs by tracking your vehicles' movements in real time, or allocate jobs based on location for maximum efficiency.

Build better behaviours

A vehicle's fuel efficiency is ultimately dependent on driving behaviours.

FuelTrace measures when drivers are speeding, braking or accelerating harshly, so that you can identify where training is required to ensure vehicles are driven in the most fuel efficient way.
