Future-proof solar for Ledwood

Ledwood were on a mission to reduce their overall operating costs. Using the latest site modelling techniques, our team designed and installed a tailored 211kW renewable energy system at the Pembroke Dock site, protected from potential future energy price hikes.

Background

Ledwood - an independent engineering, fabrication and construction company - specialise in the delivery of projects across oil, gas, process and energy industries.

Ledwood were facing ever-increasing energy prices and required the benefits a solar energy system has to offer.

Our Solution

Our team designed and delivered a highly bespoke 582-panel, 211kW tier-one solar PV solution at Ledwood's Pembroke Dock premises to maximise the commercial returns by closely matching their electricity usage profile.

The Results

Ledwood have embraced the new technology to help tackle rising energy costs and route to net zero by installing solar.

The solar PV solution now empowers Ledwood to protect itself from potential energy price hikes in the future.
